Summary

Associate Cloud Engineer with a B.S. in Computer Science and AWS Solutions Architect – Associate and Cloud Practitioner certifications. Builds highly available AWS and Azure environments with Terraform, including a multi-cloud failover system with 99.9% uptime and a 2-minute RTO. Seeking an entry-level Associate Cloud Engineer or Cloud Support role.

Technical Skills

- Cloud (AWS): EC2, VPC, IAM, S3, Route 53, CloudFront, ACM, RDS, ECS (Fargate), ECR, Lambda, Kinesis, DynamoDB, Glue, Athena, SNS
- Cloud (Azure): Blob Storage, Front Door
- Infrastructure as Code and DevOps: Terraform, Docker, CI/CD, AWS CodePipeline, AWS CodeBuild, GitHub Actions, Git, GitHub
- Languages: Python, JavaScript
- Web and Data: Node.js, Next.js, HTML, CSS, Tailwind CSS, MySQL, MongoDB
- AI Tools: Claude (AI-assisted coding, debugging, and documentation)

Certifications

- AWS Certified Solutions Architect – Associate, Aug 2026
- AWS Certified Cloud Practitioner, Oct 2025
- HashiCorp Certified: Terraform Associate, exam scheduled Nov 2026

Projects

Multi-Cloud Weather Tracker | Terraform, AWS (S3, CloudFront, Route 53, ACM), Azure (Blob Storage, Front Door), JavaScript

- Architected an active-passive multi-cloud disaster-recovery design across AWS (S3, CloudFront) and Azure (Blob Storage, Front Door), codifying the S3, ACM, Route 53, and Azure Storage layers in Terraform.
- Implemented Route 53 failover routing with HTTPS health checks on both clouds (30-second interval, 3-failure threshold), shifting traffic to Azure automatically for a ~2-minute RTO and 99.9% uptime.
- Enforced HTTPS with ACM and Azure Front Door managed certificates while holding run cost under $2/month.

Real-Time Stock Market Analytics Pipeline | Python, AWS (Kinesis, Lambda, DynamoDB, S3, Glue, Athena, SNS)

- Engineered a serverless, event-driven pipeline (Kinesis Data Streams, Lambda) that ingests live market data every 30 seconds and processes it with sub-second latency, computing price change and flagging moves over 5% as anomalies.
- Implemented a two-tier storage design: DynamoDB (on-demand, symbol/timestamp keys) for low-latency queries and an S3 data lake of raw JSON, queryable with SQL through a Glue crawler and Athena.
- Fixed a DynamoDB float/Decimal type mismatch with a Lambda transformation layer; isolated per-record failures.

Checkers Web App CI/CD Pipeline | Docker, AWS (ECS Fargate, ECR, CodeBuild, CodePipeline, IAM, VPC), GitHub

- Built a GitHub-triggered CI/CD pipeline (CodePipeline, CodeBuild, ECR, ECS Fargate) that builds a containerized Nginx app, pushes the image to ECR, and rolls out the new task on every push to main with no manual steps.
- Secured the pipeline with a CodeBuild service role and a custom IAM policy scoped to a single ECS service, and deployed Fargate tasks into a custom VPC (2 public subnets across 2 Availability Zones, Internet Gateway, HTTP-only security group).
- Diagnosed a Fargate CannotPullContainerError (arm64 vs. amd64 image) and a misplaced outbound security group rule.

Experience

Barista, Starbucks — Aug 2025 – Present

- Earned Partner of the Quarter within the first year for consistent performance in a high-volume store.

Crew Member, Chipotle Mexican Grill — Nov 2023 – Aug 2025

- Handled continuous order flow across multiple stations in a high-volume kitchen while keeping orders accurate and meeting food safety standards.

Production Associate, Applied Medical — Sep 2017 – Aug 2023

- Trained new hires and delegated tasks over a 6-year tenure, maintaining workflow efficiency.

Education

Bachelor of Science in Computer Science, California State University, Fullerton — 2025
